

In order to get your USGlobalSat Bluetooth GPS receiver working with your Android phone or tablet, you must use our GPSInfo Android App, which makes the external Bluetooth GPS receiver as your default GPS source.

Please install the GPSInfo Android App from here:

**Compatible with:** *BT-328, BT-338, BT-335, BT-359, BT-368, & BT-821*

**How to use:**

- 1) Pair your GlobalSat Bluetooth GPS Receiver to you phone, first. (pairing code: 0000).
- 2) Enable "Allow mock locations" on your device by going to Device Settings > Applications > Development > turn on or check "Allow mock locations".
- 3) Open the GPSInfo App.
- 4) Tap on "Choose Bluetooth GPS", and select the GlobalSat Bluetooth GPS receiver (listed as "BT-GPS-XXXXX").
- 5) Check the box "Location Provider Options" and it should change to: "Bluetooth GPS to replace internal GPS".
- 6) Tap on "Start/Stop GPS".
- 7) You should then be able to see the GPS data by tapping on "NMEA Data" and "GPS Data".

If you want to record the NMEA log, check the box "Enable/Disable NMEA log". The NMEA Log will be recorded in "/sdcard/nmea".
